

LACTISIL GRASS DRY

Premium grass inoculant for higher dry matter conditions (30-50% DM)

Lactisil Grass Dry is the grass additive of choice for high dry matter grasses. This product enhances aerobic stability, feed value and sugar levels.

Lactisil Grass Dry generally produces a higher pH silage, due to the different profile of acids (acetic and lactic) that are produced by *L. buchneri*.

It is also especially effective in situations where there is an elevated risk of yeasts and moulds.

Product Profile:

- *Lactobacillus buchneri* (CCM 1819)
at 1.2×10^{11} cfu/g
- *Enterococcus faecium* M74 (NCIMB 11181)
at 5.0×10^{10} cfu/g
- *Lactobacillus plantarum* (DSM 16568)
at 3.0×10^{10} cfu/g
- Xylanase enzyme pack

Lactisil Grass Dry treats silage at a rate of
400,000 cfu/g
